ABSTRACT

This publication contains statistical data on applicants for disability benefits under the Social Security Act. Tables containing data through 1966 are provided for worker and childhood disability allowances and refusals. Individual and summary statistics are given for the applicants, who are classified by characteristics such as age, sex, education, diagnostic group, and occupation. (BH)

INTRODUCTION

The Social Security Act provides five basic types of disability protection under the old-age, survivors, disability, and health insurance program:

1. Monthly benefits for disabled workers under age 65 and their dependents.
2. The preservation of old-age and survivors insurance benefit rights for disabled workers—the disability freeze which protects the disabled worker against loss of or reduction in the amount of retirement, disability, or survivor benefits by providing that the period of disability will not be counted in determining either insured status or the amount of benefits.
3. Monthly benefits (child's) for adults disabled in childhood, i.e., before attaining age 18, provided they are dependent sons and daughters of disabled or retired worker beneficiaries or of deceased insured workers.
4. Monthly benefits for disabled widows, surviving divorced disabled wives, and disabled widowers effective February 1968.
5. Vocational rehabilitation services to social security disability beneficiaries who have the potential to be restored to productive activity.

Monthly benefits are payable to dependents of disabled worker beneficiaries—namely, wives, divorced wives, and dependent husbands who have reached age 62, wives of any age who have entitled children in their care, and children—minors under age 18, students aged 18-21, and adults disabled prior to age 18.

Amount of Benefit

The disability rate for a disabled worker is equal to the worker's primary insurance amount and is calculated as if the disabled worker were of normal age. Disability benefits are payable

after a 6-month waiting period, provided the disability has occurred prior to the worker's attainment of age 65.

Upon attainment of age 65 a disabled worker's benefit is converted to a retirement benefit. The amount of the converted retirement benefit or the amount of benefits payable to survivors upon the death of the disabled worker will not be reduced because of the years before age 65 or death in which the worker was unable to work because of his disability.

Disability Defined

A person to be considered disabled for social security purposes must be unable to engage in any substantial gainful work due to a medical condition. The law in effect prior to the 1965 amendments required that the person's impairment be of long-continued and indefinite duration or be expected to result in death. Under the 1965 amendments this requirement was changed so that the claimant's impairment must last or be expected to last for a continuous period of at least 12 months. Thus, disability benefits can be paid even if the individual is expected to recover. There is, however, a 6 month waiting period—no payments can be made for the first 6 months a person is disabled. However, under both the previous and present law a person is considered disabled if he cannot work because of a severe physical or mental impairment so as to prevent the individual from working not only in his usual occupation but also in any other kind of substantial gainful work considering his age, education, training and work experience.

Insured Status for Disability Benefits

Monthly disability insurance benefits are payable to insured disabled workers under age 65. To be insured, an individual must (1) have worked in covered employment for at least 5 years out of the 10 immediately preceding the beginning of his disability and (2) be fully insured.

To get disability benefits, it used to be that an individual needed credits for at least 5 of the 10 years before he became disabled unless he became disabled before age 31 because of blindness. The younger worker normally had not had a chance to work long enough to meet this requirement. Under the 1967 amendments an individual between ages 24 and 31 needs to have worked under social security for only half the time between 21 and the time he became disabled. Those disabled before they reach 24 need only 1½ years of work under social security out of the 3 year period ending when their disability began. Service in the military is counted in these "years of work". Those disabled at age 31 or later still must have credit for at least 5 years of work during the 10 years before they become disabled.

Definition of Blindness

Blindness, as a disabling condition, is defined as a central visual acuity of 5/200 or less. The 1967 amendments provide a less restrictive definition of blindness for disability freeze purposes—a visual acuity of 20/200 or less, commonly called industrial blindness. The less restrictive definition of blindness also applies for benefit purposes to a blind worker aged 55 or over who is unable to engage in substantial gainful activity requiring skills or abilities comparable to those of any gainful activity in which he has previously engaged with some regularity and over a substantial period of time. The worker under age 55 who is industrially blind and therefore able to establish disability for freeze purposes still must meet the regular definition of disability—inability to engage in any substantial gainful activity for benefit purposes.

Disability Freeze

The disability freeze provision results in the disabled worker having his insured status and his average monthly wage for benefit purposes maintained as they were when he became disabled. Since the enactment of the 1960 amendments, which eliminated the requirement of age 50 for monthly benefits, virtually all per-

sons who qualify for the disability freeze also qualify for monthly benefits (an exception being certain blind persons).

Benefits to Adults Disabled in Childhood

Monthly benefits are payable to disabled persons aged 18 or over—dependent sons and daughters of retired, disabled, and deceased insured workers—whose disability began before age 18 (child's benefit). Disability for this category of beneficiaries is defined in the same way as it is for disabled workers. The disability must be present at the time the application is filed and must have continued since before the child reached age 18.

Disability Protection for Young Workers

Under the regular provisions of the Social Security Act a worker is insured if he has at least 20 quarters of coverage in the last 40 calendar quarters. The 1967 change in the law provides that a worker disabled before age 31 needs only half the number of quarters elapsing after age 21. Before this amendment, this provision applied only to workers who were disabled by blindness before reaching age 31.

Benefits for Disabled Widows and Widowers

A widow, surviving divorced wife, or widower must have, to meet the disability requirements of the law, a medical condition that is so severe as to ordinarily prevent a person from working. The 1967 amendments provide monthly cash benefits for disabled widows aged 50-59 and for surviving divorced wives and dependent widowers aged 50-61. In addition, the disability must have lasted or be expected to last for a period of at least 12 months. The disability must have begun within a specified 7-year period. The disablement must keep the widow or widower from performing any gainful activity (rather than substantial gainful activity).

Armed Services

Men and women in the Armed Forces, like other

insured workers, have been eligible for disability benefits since 1957. The amount of a soldier's monthly disability payment is based on his average earnings under social security. These earnings include the extra allowances for overseas duty, combat duty, flight duty, etc. For social security purposes, a serviceman receives credit for an additional \$100 earnings each month over and above his base pay. This is because base pay does not reflect such items as housing, food, and clothing. No additional social security contribution is deducted for the extra credit. The serviceman and his dependents can receive disability payments even though his service status and pay continue.

Amendments of 1967

The 1967 amendments to the Social Security Act included several provisions relating to disability which qualified additional persons for monthly cash benefits. These provisions provide the following:

- (1) a more liberal insured-status requirement for young workers disabled before age 31;
- (2) benefits for the disabled widows and widowers; and
- (3) a liberalized definition of blindness.

Disability Ends

Disability benefits end for a disabled worker when the person is no longer disabled within the meaning of the law. If a person works while still under a disability, the law continues his benefit payments during 9 months of work. Then, if it is determined after the 9 months that he has demonstrated his ability to do substantial gainful work and therefore is no longer disabled, his benefits are paid for 3 more months. Disability ends for a disabled widow, surviving divorced wife or widower where the conditions are no longer met. The law continues benefits for 2 months after the person's condition improved to the extent that it no longer meets the requirements of the law.

Vocational Rehabilitation

The Social Security Act provides for reimbursement from the trust funds for the cost of vocational rehabilitation services furnished to disabled persons receiving benefits because of their disability. The total amount of funds that may be made available for purposes of reimbursement for such services may not, in any fiscal year, exceed 1 percent of the benefits certified for payment to these types of beneficiaries in the preceding year.

Other Disability Programs

Definitions of disability are not the same in all government and private disability programs. Government agencies must follow the particular laws which apply to their disability programs. Therefore, a finding by a private organization or another government agency that a person is disabled would not necessarily mean that he meets the disability requirements of the Social Security Act.

Contents

The following tables contain selected data on the characteristics of applicants for benefits or for a period of disability under the disability provisions of the old-age, survivors, disability, and health insurance program for whom determinations were made during calendar year 1966. Tables 2 through 29 contain data with respect to worker disability applicants and tables 30 through 39 contain data with respect to childhood disability applicants.

The nomenclature used for diagnostic groups has been taken from the 7th revision of the Manual of the International Statistical Classification of Diseases, Injuries, and Causes of Death, published by the World Health Organization. Certain medical diagnoses within the diagnostic groups—hay fever, tonsillitis, and influenza, for example—would not be a basis for allowing a period of disability and therefore are not represented in the allowed claims.

The Fourth Edition of the Social Security Handbook, published February 1969, contains a detailed explanation of the Federal old-age, survivors, disability, and health insurance pro-

gram. This edition may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, for \$2.25.

BENEFITS UNDER THE DISABILITY PROVISIONS OF THE SOCIAL SECURITY ACT

I. Disability Benefits

At the end of December 1967, nearly 1,200,000 disabled workers under age 65, and about 950,000 dependent wives, husbands, and children were receiving benefits under the social security program, compared to 1,100,000 disabled workers and 875,000 dependents at the end of the preceding year. The corresponding monthly rates were \$117 million and \$30 million at the end of December 1967 and \$108 million and \$28 million at the end of December 1966. The average monthly benefit for disabled workers was about \$98.50 at the end of 1967—not much more than the average at the end of the preceding year.

II. Benefits Payable to Adults Disabled in Childhood

At the end of December 1967, child's benefits were being paid to about 230,000 disabled adults whose disability began before they reached age 18 and who were dependent sons and daughters of retired, disabled, or deceased insured workers. The corresponding number a year earlier was 214,000. The monthly rate of childhood disability benefits amounted to \$12.3 million at the end of 1967 and \$11.2 million at the end of 1966.

Type of Disease

The five specific diseases with the largest number of beneficiaries were (1) arteriosclerotic heart disease, including coronary disease; (2) emphysema; (3) schizophrenic disorders (mentia praecox); (4) osteo-arthritis and al-

lied conditions; (5) hypertensive heart disease, with clinical type unspecified. Together the disability allowances based on these five diseases represented 35 percent of all disability allowances in 1966, compared to 37 percent in the previous year. The first three of these diseases retained the same rank among disability allowances in 1966 as among disability allowances in 1965. The last two diseases, ranking 4 and 5 among 1966 allowances, ranked 5 and 4 among 1965 allowances.

The 45,700 disability allowances based on arteriosclerotic heart disease and the 17,000 allowances based on emphysema represent only slight increases from 1965 levels. On the other hand, disability allowances based on schizophrenic disorders declined by 20 percent from 16,300 in 1965 to 13,100 in 1966. Disability allowances based on hypertensive heart trouble declined by 1500 or 16 percent from the 1965 level of 10,700 but disability allowances based on osteoarthritis increased by 5 percent from 9,800 in 1965 to 10,300 in 1966.

Disabilities Among Men and Women

As in past years, diseases of the circulatory system were the most prevalent disabling condition, accounting for 27 percent of the disability allowances in 1966. Other most common disabling conditions were diseases of the bones and organs of movement and diseases of the nervous system and sense organs. Together these three groups accounted for 52 percent of the disability allowances in 1966.

Women made up 25 percent of the disability applicants who were allowed benefits in 1966. Diseases more common as disabling conditions

among women beneficiaries than among men included neoplasms which afflicted 12.4 percent of the women compared to 10.1 percent of the men, and mental and psychoneurotic disorders as disabling conditions for 13.5 percent of the women as compared with 10.4 percent for the men. Also, diseases of the blood and organs of movement were more common as disabling conditions among women than among men since 15.1 percent of the women and only 11.8 percent of the men were allowed benefits in 1966 on this basis.

On the other hand, accidents were relatively more frequent as disabling conditions among men than among women, 6.8 percent compared to 4.5 percent. Diseases of the respiratory system were markedly more common as disabling conditions among men than women, accounting for 9.1 percent of the disability allowances for men compared to only 3.9 percent of the disability allowances for women.

Age, Sex, and Race

About 273,500 workers were allowed disability benefits in 1966, of whom 206,000 or 75 percent were men and 67,000 were women. Nearly 71 percent of the men were aged 50 and over and about 74 percent of the women. The median age for the men was 56 and for women somewhat under 54. White persons comprised 85 percent of all workers, Negroes nearly 14 percent, and 1 percent were persons of other races.

Age at Disability

More than 31 percent of the disabled workers who were allowed disability benefits during 1966 were aged 60 and over when their benefits began. An additional 41 percent were aged 50-59 and the remaining 28 percent were under age 50. The distribution of the 273,000 disability allowances in 1966 by diagnostic group and by age is shown in table 2. Although disabled workers aged 50 and over predominated in each of the major diagnostic groups, the

classification of primary diagnoses include workers in a wide range of ages.

There was considerable variation among the various diagnostic groups to the age distribution of the disability allowances included within the group. For example, among workers who were allowed benefits because of afflictions with diseases of the circulatory system, 15 percent were aged 49 or younger. Among persons with neoplasms, 25 percent of those allowed disability benefits were aged 49 or younger. On the other hand, disabled workers under age 50 figured in 52 percent of the allowances based on mental, psychoneurotic, and personality disorders. Also, almost half of the disability allowances based on injuries went to workers under 50.

Diseases of Respiratory System

A little more than 21,300 disability allowances in 1966 were based on diseases of the respiratory system, nearly as many as in 1965. Emphysema figured in about 80 percent of disability allowances involving diseases of the respiratory system and in about 6 percent of all disability allowances in 1966. Pneumoconiosis, another of the diseases of the respiratory system of special interest to the coal mining industry, was involved in 725 disability allowances in 1966 as compared with 1175 disability allowances in 1965, a reduction of 40 percent. Pneumoconiosis is a lung disease caused by extended inhalation of fine dust particles. The coal dust clogs the lungs and impairs the ability of the individual to absorb oxygen and displace carbon dioxide. The disease is commonly known as "black lung" and is believed to be incurable. Symptoms resemble those of emphysema and chronic bronchitis. About 2400 miners and mining machine operators were allowed disability benefits during 1966, most of them for diseases other than pneumoconiosis. Not all the miners were employed in the coal mining industry. Some were working in quarrying operations and in the metal extracting industries.

Leading Causes of Disability by Occupation

Arteriosclerotic heart disease leads all other disabling conditions as a major disability factor. The disease affected 45,700 persons under the social security disability program in 1966, representing about 17 percent of all allowances. It is equally prevalent among the major occupational groups on a percentage basis and about evenly distributed between the sexes compared to the total.

About 90 percent of the allowances based on emphysema went to men. Emphysema, the second highest cause of disability, hits hardest among the male skilled workers. Though this occupational group represents about 25 percent of the male group, they account for 30 percent of the men with emphysema. In comparison, semi-skilled male workers who comprise 15 percent of all workers represent 16 percent of the men with emphysema.

Ranking third among disabling conditions are schizophrenic disorders. About 71 percent of the allowances based on schizophrenic disorders went to men and 29 percent to women. Female clerical and sales workers are overly represented among those women with schizophrenic disorders. Though clerical and sales occupations comprise 26 percent of all female workers, they account for 34 percent of schizophrenic disorders. Interesting to note, male skilled workers comprise 15 percent of all schizophrenics while accounting for 25 percent of all male workers.

Pulmonary tuberculosis continues to be a leading cause of disability despite recent advances in treatment. The number of allowances in 1966 with tuberculosis increased 10 percent over the preceding year and 45 percent more than the number two years ago. Perhaps the increase in the number of allowances based on tuberculosis can be attributed to the liberalized definition of disability in the 1965 amendments.

Persons engaged in the professional and managerial and clerical and sales occupations suffer

less from pulmonary tuberculosis. We may presume that the higher economic levels and greater education usually associated with persons in these occupational groups may have some bearing on the lower incidence of this disease.

Diabetes is a very prevalent disabling condition among disability allowances for women in the service industry. Nearly 50 percent of the allowances based on diabetes went to persons within this occupational category. Women in the service industry comprised about 27 percent of all the women with disability allowances in 1966.

Of the leading causes of disability, farmers and those in related activities seem to be more affected by osteo-arthritis and emphysema and less severely by schizophrenic disorders.

Occupations

Drivers of trucks and other vehicles are in the most hazardous occupation and represent the largest occupational group of disabled under the social security program. They account for 5 percent of all disabled workers. Ranking behind truck drivers are farmers and general repairmen with 2.7 percent of the total disabilities. Following in that order are managers and officials at 2.3 percent and workers in the construction trades, general construction at 2.3 percent, carpenters at 2.2 percent, and painters and plumbers combined at 1.8 percent. Among male workers, truck drivers, etc., represent nearly 6 percent of all disabled workers. Interestingly, employment as general maids leads all other occupations among female disabled workers. Maids represent nearly 7 percent of the group. Perhaps this large proportion of the disabled female workers can be explained by the gathering in of workers with the least skill and attachment to the labor force—those who can regulate working arrangements to suit their physical conditions. Ranking further back in second position are waitresses at 4.3 percent of the total and bookkeepers, general office clerks, salespersons, and cooks at 3.9 percent.

Summary of Selected Data on Worker Disability Allowances

The following data are for the 273,513 worker disability allowances in 1966.

1. Sex

	Number	Percent
Total	273,513	100
Male	206,398	75
Female	67,115	25

2. Age in 1966

- (1) 31 percent were aged 60 and over
- (2) 25 percent were aged 55-59
- (3) 16 percent were aged 50-54
- (4) 18 percent were aged 40-49
- (5) 10 percent were under age 40

3. Age in Year of Onset of Disability

- (1) 68 percent were aged 50-65
- (2) 20 percent were aged 40-49
- (3) 12 percent were under age 40

4. Incidence by Primary Diagnosis and Age

The 3 primary diagnoses occurring most often by age were as follows:

Under 40

1. Schizophrenic disorders.
2. Pulmonary tuberculosis.
3. Displacement of intervertebral disc.

Aged 55-59

1. Arteriosclerotic heart etc.
2. Emphysema.
3. Osteo-arthritis and allied conditions.

Aged 40-49

1. Arteriosclerotic heart disease, including coronary disease.
2. Schizophrenic disorders.
3. Displacement of intervertebral disc.

Aged 60 and over

1. Arteriosclerotic heart etc.
2. Emphysema.
3. Osteo-arthritis and allied conditions.

Aged 50-54

1. Arteriosclerotic heart etc.
2. Emphysema.
3. Schizophrenic disorders.

5. Incidence by Diagnostic Group

The ranking by frequency of occurrence was as follows:

Diagnostic group	Percent	Cumulative Percent
1. Diseases of the circulatory system (including heart disease)	27	27
2. Diseases of the bones and organs of movement	13	40
3. Diseases of the nervous system and sense organs	12	52
4. Mental, psychoneurotic, and personality disorders	11	63
5. Neoplasms	11	73
6. Diseases of the respiratory system (excluding tuberculosis and other infective diseases)	8	81

Diagnostic group (Continued)	Percent	Cumulative Percent
7. Accidents, poisonings, and violence	6	88
8. Infective and parasitic diseases	4	92
9. Allergic, endocrine system, metabolic, and nutritional diseases . . .	4	95
10. Other	5	100

6. Incidence by Primary Diagnosis

The 5 primary diagnoses occurring most often were as follows:

Primary diagnoses	Number	Percent
1. Arteriosclerotic heart disease, including coronary disease	45,714	17
2. Emphysema	16,998	6
3. Schizophrenic disorders (dementia praecox)	13,097	5
4. Osteoarthritis and allied conditions	10,336	4
5. Hypertensive heart disease, with clinical type unspecified	9,198	3

7. Visual or Auditory Impairments

	Number
(1) Industrial blindness	2,059
(2) Statutory blindness	2,490
(3) Total deafness	614

8. State of Residence

The 6 States with the most worker allowances were as follows:

State	Number	Percent
1. California	29,365	11
2. New York	27,992	10
3. Pennsylvania	16,528	6
4. Texas	14,025	5
5. Illinois	13,339	5
6. Ohio	12,419	5

9. Leading Causes by Major Occupational Groups

	Number	Percent
Professional and managerial	26,756	9.8
Clerical and sales	32,532	11.9
Service	37,314	13.6
Agricultural, fishery and forestry	17,405	6.4
Manufacturing and related activities	127,828	46.7
Skilled	54,988	20.1
Semi-skilled	39,947	14.6
Unskilled	32,893	12.0
Unknown	31,678	11.6

Summary of Selected Data on Childhood Disability Allowances

The following data are for the 19,027 childhood disability allowances in 1966.

1. Sex

	Number	Percent
Total	19,027	100
Male	10,247	54
Female	8,780	46

2. Age in 1966

- (1) 58 percent were aged 18-29
- (2) 25 percent were aged 30-39
- (3) 17 percent were aged 40 and over

3. Education

- (1) 44 percent had not attended a regular school.
- (2) 19 percent completed the 5th grade or a higher grade of elementary school but did not attend high school.
- (3) 14 percent attended elementary school for 1 or more years but did not advance beyond the 4th grade.
- (4) 18 percent completed 1 or more years of high school.

4. Mobility

- (1) 27 percent were confined in an institution. The proportion of persons in the different age-groups who were confined in an institution ranged from 34 percent for persons aged 45 and over to 24 percent for persons aged 18-24.
- (2) 7 percent were housebound (bedridden, chairfast, etc.).
- (3) 65 percent were capable of some activity outside the home. Of these 38 percent needed help of some kind.

5. Incidence by Diagnostic Group

The ranking by frequency of occurrence was as follows:

Diagnostic group	Percent	Cumulative Percent
1. Mental, psychoneurotic, and personality disorders	69	69
2. Diseases of the nervous system and sense organs	21	90
3. Congenital malformations	3	93
4. Infective and parasitic diseases	2	95
5. Diseases of the bones and organs of movement	2	96
6. Other	4	100

6. The 6 primary diagnoses occurring most often were as follows:

Primary diagnoses	Percent
1. Mental deficiency	54
2. Cerebral spastic infantile paralysis	9
3. Schizophrenic disorders (dementia praecox)	7
4. Epilepsy	7
5. Mental deterioration and certain other psychoses of unspecified etiology	4
Chronic brain syndrome	3

7. State of Residence

	State	Number	Percent
1.	New York	1,865	10
2.	California	1,270	7
3.	Pennsylvania	1,242	7
4.	Ohio	1,118	6
5.	Illinois	1,008	5
6.	Texas	904	5

Table 1.--Disability allowances and denials: Number of worker and childhood disability allowances and denials, 1955-66

[Based partly on 100-percent data and partly on 20-percent sample]

Year	Worker allowances	Worker denials	Childhood allowances	Childhood denials
Total.....	2,417,343	1,849,165	244,054	52,656
1955.....	57,221	36,310	---	---
1956.....	149,823	155,875	---	---
1957.....	165,003	125,720	36,267	4,873

Table 2.--Worker disability allowances: Number by age, sex, diagnostic group, and primary diagnosis, 1966

[Primary diagnoses relating to 100 or more workers shown separately]

Diagnostic group and primary diagnosis	Inter- national code	Age 1/							
		Total	Under 30	30-39	40-44	45-49	50-54	55-59	60 and over
		Male							
Total.....	---	206,398	4,793	16,881	15,581	21,680	31,893	49,023	66,547
Infective and parasitic diseases...	001-138	9,616	401	1,484	1,203	1,479	1,644	1,846	1,559
Pulmonary tuberculosis.....	002	7,629	348	1,267	1,032	1,239	1,344	1,348	1,051
Tuberculosis of bones and joints, active or unspecified.....	012	132	7	27	19	16	14	20	29
Cardiovascular syphilis except aorta....	023	109	0	0	3	3	12	36	55
Tabes dorsalis.....	024	108	0	1	2	5	16	32	52
Certain syphilis of central nervous system 2/.....	026	205	1	9	9	23	38	54	71
Acute poliomyelitis.....	080	211	1	31	25	26	31	65	32
Late effects of acute poliomyelitis.....	081	263	3	24	22	31	55	72	56
Other fungus in tions.....	134	94	1	11	8	18	12	28	16
Certain infect. and parasitic diseases.....	138	106	9	33	15	15	13	15	6
Other.....	---	759	31	81	68	103	109	176	191
Neoplasms.....	140-239	20,889	348	1,084	1,329	2,243	3,635	5,400	6,850
Malignant neoplasm of tongue.....	141	281	1	4	9	44	56	90	77
Malignant neoplasm of floor of mouth....	143	131	0	2	7	16	37	36	33
Malignant neoplasm of other parts of mouth unspecified.....	144	186	0	2	6	21	50	56	51
Malignant neoplasm of oral mesopharynx..	145	139	0	3	6	20	30	40	40
Malignant neoplasm of pharynx, unspecified.....	146	123	0	2	2	13	28	39	39
Malignant neoplasm of oesophagus.....	150	395	1	8	10	34	100	114	126
Malignant neoplasm of stomach.....	151	717	2	34	44	68	120	186	263
Malignant neoplasm of large intestine, except rectum.....	153	1,139	11	46	51	117	181	308	425
Malignant neoplasm of rectum.....	154	877	5	29	42	67	140	246	348
Malignant neoplasm of biliary passages and of liver.....	155	114	2	3	10	1	18	28	41
Malignant neoplasm of liver.....	156	171	2	8	17	18	36	48	42
Malignant neoplasm of pancreas.....	157	571	2	18	43	64	112	149	183
Malignant neoplasm of larynx.....	161	873	0	8	33	82	148	250	352
Malignant neoplasm of bronchus and trachea, and of lung specified as primary.....	162	2,063	2	67	97	229	380	569	713
Malignant neoplasm of lung, unspecified as to whether primary or secondary....	163	3,334	6	99	175	362	603	943	1,146
Malignant neoplasm of thoracic organs....	165	130	1	8	11	15	20	43	32
Malignant neoplasm of breast.....	170	66	0	3	3	12	12	20	16
Malignant neoplasm of prostate.....	177	1,047	0	1	6	34	88	271	647
Malignant neoplasm of testis.....	178	142	32	41	22	12	10	18	7
Malignant neoplasm of kidney.....	180	441	1	16	40	52	77	115	141
Malignant neoplasm of bladder and other urinary organs.....	181	598	2	4	22	52	92	163	261
Malignant melanoma of skin.....	190	191	11	27	23	30	26	77	39
Malignant neoplasm of skin excluding malignant melanoma.....	191	238	0	7	12	23	42	73	81
Malignant neoplasm of brain and other parts of nervous system.....	193	992	40	138	113	162	177	206	156
Malignant neoplasm of thyroid gland....	194	49	3	2	4	5	7	9	19
Malignant neoplasm of bone (excluding jaw bone).....	196	217	15	19	17	27	39	55	50
Malignant neoplasm of connective tissue.....	197	159	6	17	23	18	31	25	39
Malignant neoplasm of certain and unspecified sites.....	199	1,828	22	91	127	214	350	578	546
Lymphosarcoma and reticulosarcoma.....	200	553	20	42	42	76	104	127	142
Hodgkin's disease.....	201	514	73	115	80	64	57	62	63
Lymphoma.....	202	96	3	6	9	12	18	23	25

- 1/ The basis for allowing a period of disability was not necessarily the worker's visual impairment, except for workers who were statutorily blind.
- 2/ Central visual acuity of: 5/200 or less, or concentric contraction of visual field to 5 degrees or less, in the better eye with the use of correcting lens.
- 3/ Central visual acuity better than 5/200 but not greater than 20/200 in the better eye with the use of correcting lens.
- 4/ Central visual acuity better than 20/200 but not greater than 20/60 in the better eye with the use of correcting lens.
